

Feast9 — User Journey Maps

Version dated 03 October 2026

One page per role. Each page follows a typical working day from left to right. For every stage it shows what the person does, where in Feast9 they do it, what Feast9 does to help, and what to watch out for. Use it for training, for explaining Feast9 to new staff, and for spotting where the workflow can improve.

Doing	what the person does at this stage
In Feast9	the page or button they use
Helps	what Feast9 does for them
Watch out	limits, risks and common mistakes

Receptionist	Runs the front desk: greets patients, registers them, keeps the diary full and chases follow-ups. Never sees medical records or money figures.
Doctor	The clinic's dentist: examines, plans and treats, records everything clinically, and keeps an eye on the practice's finances.
Guest doctor	A visiting specialist who treats some of the clinic's patients on set days. Full clinical access, but no money figures, no Settings and no privacy requests.
Administrator	Usually the senior doctor or practice manager: sets Feast9 up, manages staff access, watches backups and compliance, and oversees the money.

Receptionist

Who: Runs the front desk: greets patients, registers them, keeps the diary full and chases follow-ups. Never sees medical records or money figures.

Goal: Every patient is booked, reminded and followed up — and nobody slips through.

	1. Start the day	2. Patient arrives	3. Book & remind	4. Follow-ups & no-shows	5. Lab work	6. Privacy request
Doing	Signs in; checks today's list and follow-ups due.	Finds the patient, or registers a new one; gives the privacy notice.	Books the visit or a repeating series; copies the reminder text.	Calls patients whose follow-up is due; books them or marks Done; records no-shows.	Tracks jobs at the lab; updates status when work comes back.	Records a patient's request about their data the same day.
In Feast9	Dashboard	Patients > Search / + New Patient	Appointments > + New Appointment	Dashboard > Book Appointment / Done	Lab Work	Patient page > + New Privacy Request
Helps	Overdue (red) and due-soon (amber) follow-ups listed first; today's appointments with their case.	Search by name or mobile; privacy-notice tick enforced; 'Privacy notice pending' list for older records.	Doctor-coloured calendar; repeat bookings; ready-made WhatsApp/SMS text if the patient agreed to reminders.	A no-show automatically creates a next-day follow-up.	'Before visit' badge when the patient is booked before the work is due back.	90-day deadline set automatically; the menu shows how many are waiting.
Watch out	Shared PC: must log out when stepping away.	New patient with no case only shows under 'All patients'.	No reminder text for patients who didn't agree to reminders.	Doctor sets follow-up dates; front desk can't add them on a case.	Can update, but adding/deleting lab work is the doctor's job.	Can't complete requests — passes them to a doctor or admin.

Doctor

Who: The clinic's dentist: examines, plans and treats, records everything clinically, and keeps an eye on the practice's finances.

Goal: Treat safely, keep a complete record, and get paid for the work done.

	1. Prepare	2. Plan the case	3. Consent	4. Treat & record	5. Prescribe	6. Bill & follow up	7. Review the practice
Doing	Signs in with two-step code; reviews today's patients and their alerts.	Opens a case: title, procedures, estimated cost.	Prints the one-page consent form; patient, doctor and witness sign; marks it recorded.	Charts teeth; writes the visit note; uploads X-rays.	Writes a structured prescription by generic name and prints it.	Records payment; sets the next follow-up or books it; closes finished cases.	Checks revenue, pending payments and profitability.
In Feast9	Dashboard > Patient page	Patient > + New Case	Case > Print Consent Form / Mark Consent Recorded	Dental Chart; Case > Visit Notes, Attachments	Case > Prescriptions	Case > Payment Log, Follow-up; Close Case	Reports, Analytics, Financial Assessment
Helps	Medical Alerts (allergies, conditions) first on the patient page; lab work due before visit flagged.	Searchable procedure list; cost history kept automatically.	Form pre-filled from the case; red border until consent is recorded.	Note marks today's appointment Completed; chart keeps full history.	Allergy check stops a clashing medicine until confirmed; printout carries registration details.	Balance updates live; follow-up appears on the Dashboard on its date.	Quick period buttons, Excel export, year-on-year comparison.
Watch out	Two-step sign-in may be compulsory for doctors.	Cost changes are recorded with a reason, never silently overwritten.	Consent is per case — a new case needs a new form.	Notes can't be edited — corrections are new notes.	The allergy check can miss a drug — still read the alert.	An erasure request can't complete while money is owed.	Enter case expenses for profit figures to mean anything.

Guest doctor

Who: A visiting specialist who treats some of the clinic's patients on set days. Full clinical access, but no money figures, no Settings and no privacy requests.

Goal: Pick up the patient's history quickly, treat, and hand over cleanly.

	1. Sign in	2. Today's patients	3. Catch up	4. Treat & record	5. Hand over	6. Leave
Doing	Signs in with own account and two-step code.	Sees the day's appointments and opens each patient.	Reads alerts, previous notes, chart and X-rays.	Adds visit notes ('Attended by' themselves), charts teeth, prescribes, uploads images.	Sets a follow-up, records lab work, writes a referral if needed.	Signs out.
In Feast9	Sign-in page	Dashboard; Appointments	Patient page; Case; Dental Chart	Case sections; Dental Chart	Case > Follow-up, Lab Requisitions, Referral Notes	Logout
Helps	Own account means every note is recorded under their name.	Appointments show which case each visit is for.	Complete clinical history in one place.	Same tools as the resident doctor, including the allergy check.	Front desk sees the follow-up on the Dashboard and the lab job on Lab Work.	Automatic logout after inactivity as a safety net.
Watch out	Never borrow a resident doctor's login.	Balance tile shows 'Restricted' — by design.	Payments and costs are hidden.	Cannot delete clinical files.	A new case they open is created without a cost — the clinic adds it.	Clinic deactivates the account when the visiting arrangement ends.

Administrator

Who: Usually the senior doctor or practice manager: sets Feast9 up, manages staff access, watches backups and compliance, and oversees the money.

Goal: A secure, well-run system the clinic can rely on — and evidence that it is.

	1. Set up	2. Staff & access	3. Protect the data	4. Daily check	5. Money	6. Privacy & audit
Doing	Completes Setup; enters clinic details, doctors, case types; sets sign-in rules.	Adds each person with the right role; handles leavers, lockouts, lost phones.	Sets up backups once; stores the backup key off the PC; sets a copy folder.	Glances at the Dashboard and backup tiles.	Reviews reports, enters case expenses and monthly overheads.	Completes privacy requests; checks who opened or changed records.
In Feast9	Settings	Settings > Users	Settings > Backup & Data	Dashboard; Backup & Data	Reports; Financial Assessment; Monthly Evaluation	Privacy Requests; Settings > Audit Log
Helps	Doctor colours suggested so the calendar stays readable.	Set Password, Unlock, Reset 2FA, Deactivate (ends sessions at once).	Daily automatic backups; tiles turn red if one fails or is stale.	Warning banner on the Dashboard if backups need attention.	Clone overheads into future months; Excel exports.	Erasure blocked while money is owed or a case is active; access PDF ready-made.
Watch out	Doctors' registration details are needed for valid prescriptions.	One account per person — never shared.	Without the key, backups can't be restored.	Ask the support firm to test a restore each quarter.	Exports contain patient names — store them safely.	90-day deadline for every request.
