

FEAST9

Dental Clinic Management System

USER MANUAL

For Receptionists · Doctors · Guest Doctors · Administrators
Version dated 03 October 2026

Contents

1. Who can do what
2. Signing in and keeping your account safe
3. Finding your way around
4. Patients
5. Treatment cases
6. Dental chart
7. Appointments
8. Lab Work
9. Reports and Analytics
10. Financial Assessment
11. Privacy Requests
12. Settings (administrators)
13. Backup & Data (administrators)
14. Good habits
15. Common questions

How to use this manual: you don't need to read it all. Find the task you want to do in the contents and follow the steps. Words in **bold** are the names of buttons, menu items and boxes exactly as they appear on screen.

1. Who can do what

Everyone signs in with their own username. What you see depends on your role, which the administrator sets when creating your account.

Role	What they use Feast9 for
Receptionist	Patients' contact details, appointments, follow-up reminders on the Dashboard, the Lab Work list, and Privacy Requests. No medical history, treatment cases, notes, prescriptions, dental chart or clinical files, and no money figures (costs, payments, balances, reports).
Doctor	Everything clinical (cases, notes, prescriptions, dental chart, files), payments and costs, Reports, Analytics, Financial Assessment, and completing Privacy Requests.
Guest doctor	A visiting doctor. The same clinical work as a doctor, but no money figures, no Privacy Requests, no Settings, and cannot delete clinical files.
Administrator	Everything a doctor can do, plus Settings: staff accounts, doctors, case types, clinic details, backups and the activity log.

If a button or page you expect isn't there, your role doesn't include it. That is deliberate, not a fault. Ask the administrator if you think your role is wrong.

2. Signing in and keeping your account safe

Signing in

1. Open Feast9 in the browser and type your **username** and **password**.
2. If you use two-step sign-in, type the 6-digit code from the authenticator app on your phone (or one of your recovery codes).
3. You arrive on the **Dashboard**.

Passwords

- A password must be at least 10 characters and not a common or easy-to-guess one. A short sentence you can remember works well, e.g. *blue kettle on Tuesday*.
- Change your own password from **My Account > Change Password**.
- **Forgot your password?** If you use two-step sign-in, click **Forgot Password** on the sign-in page: answer your security question and enter a code from your phone. If you don't use two-step sign-in, ask the administrator to set a new password for you.

Two-step sign-in (2FA)

Two-step sign-in asks for a code from your phone as well as your password, so a stolen password alone isn't enough. Your clinic may make it compulsory.

1. Install an authenticator app on your phone (Google Authenticator, Microsoft Authenticator, Authy or similar).
2. In Feast9 go to **My Account > Set Up 2FA** and scan the square code with the app.
3. Type the 6-digit code the app shows to confirm.
4. Write down the **recovery codes** shown next and keep them somewhere safe, away from your phone. Each works once if you lose your phone. They are shown only once.

Things Feast9 does to protect you

- **Automatic logout:** if Feast9 is left untouched for a while (30 minutes unless your clinic changed it) you are signed out, and everyone is signed out 12 hours after signing in. Typing counts as activity, so a long note won't be cut off.
- **Account lock:** after 5 wrong passwords in a row your account locks for 15 minutes, even for the right password. The administrator can unlock it sooner.
- **"Confirm your password":** before a sensitive action (adding staff, deleting a clinical file, running a backup, completing a privacy request...) Feast9 asks for your password again if you signed in more than 10 minutes ago.

Lost your phone and your recovery codes? The administrator can reset your two-step sign-in from **Users**, and you set it up again.

3. Finding your way around

The menu along the top of every page takes you to each part of Feast9. You only see the items your role can use.

- **Dashboard** — your starting page (see below).
- **Patients** — find, register and open patients.
- **Appointments** — the monthly calendar.
- **Lab Work** — every job sent to an outside lab.
- **Reports, Analytics, Financial Assessment** — money and practice figures (doctors and administrators).
- **Privacy Requests** — patients' requests about their data; the number in brackets is how many are waiting.
- **My Account** — your password, security question and two-step sign-in.
- **Settings** — clinic setup (administrators).
- **Logout** — always sign out when you leave a shared computer.

The Dashboard

- **Four tiles** at the top: follow-ups needing attention, total outstanding balance (shows *Restricted* for roles that can't see money), active cases, and today's appointments.
- **Follow-ups Needing Attention** — red rows are overdue, amber rows are due in the next 3 days. Click **Book Appointment** to book the visit, or **Done** once the patient has been contacted.
- **Today's Appointments** — the day's list, with the case each visit is for.
- **Lab Requisitions Due Before Visit** — lab work that hasn't come back for a patient who is booked in the next 3 days.

4. Patients

Registering a new patient

1. Go to **Patients > + New Patient**.
2. Fill in the name, sex, date of birth (or age) and mobile number. For a patient under 18, a guardian's name and mobile number are required.
3. Doctors also fill in medical history and allergies here. (Receptionists don't see these boxes; a doctor adds them later.)
4. Give the patient the privacy notice, then tick **Patient (or guardian, if under 18) has received and accepted the privacy notice**. Registration can't be saved without it.
5. Tick the reminders box only if the patient agrees to receive appointment reminders.
6. Click **Register Patient**. The patient's page opens.

Finding a patient

- The Patients page normally lists only patients with an active case (or money owing). Use the buttons above the list to switch to **All patients**, or to **Privacy notice pending** to see who still needs to be given the notice.
- Type a name, mobile number, email or address in the search box and click **Search**. Click **Clear search** to see the full list again.
- A newly registered patient with no case yet appears under **All patients**.

The patient's page

- **Medical Alerts** — allergies and conditions at a glance (doctors only).
- **Active Treatment Cases** — red or amber badges mean a follow-up is overdue or due soon. Click a case to open it (not available to receptionists).
- **Appointments** — past and upcoming, with **+ New Appointment**.
- **Contact Details & Privacy Status** — contact details, whether the privacy notice was accepted, reminder consent, and any privacy requests.
- Buttons at the top: **Edit**, **Dental Chart** and **Patient Summary (PDF)**.

An amber **Privacy notice not accepted** badge means the patient hasn't been given the notice yet (common for patients brought over from the old system). Give it to them at their next visit, then tick it on the **Edit** form.

5. Treatment cases

A case is one course of treatment, for example *Root canal and crown, upper right*. A patient can have several. Everything about that treatment is recorded on the case's page.

Who can do this: Doctors, guest doctors and administrators. Receptionists cannot open cases.

Opening a new case

1. On the patient's page click **+ New Case**.
2. Enter a short title, choose the doctor, and tick the procedures from the **Procedures** list (type in its search box to find one quickly). Use **Other procedure** for anything not listed.
3. Enter the estimated cost (doctors and administrators) and click **Create Case**.

Consent (on paper)

1. On the case page, click **Print Consent Form**. It prints on one sheet, filled in with the patient, case, procedures and doctor.
2. Fill in the blanks by hand (tooth, estimated cost and visits, specific risks), tick each box as you explain it, and have the patient (or guardian), the doctor and a witness sign.
3. File the signed form (or scan it into **Clinical Attachments**), then click **Mark Consent Recorded**, adding where it is filed. The red warning border disappears.

Visit notes

- Write what happened at the visit and click **Add Visit Note**. **Attended by** shows which doctor saw the patient; change it if someone else did.
- Adding a note marks the patient's appointment for that day as Completed.
- Notes can't be changed or deleted afterwards. To correct one, add a new note explaining the correction.

Prescriptions

1. Choose the prescribing doctor and type the diagnosis.
2. For each medicine enter the **generic name** (the brand is optional), strength, dosage, how often, and how it is taken. Use **+ Add another medicine** for more.
3. Click **Add Prescription**, then **Print** to hand it to the patient.

Allergy check: if a medicine may clash with an allergy recorded for the patient (for example amoxicillin for a penicillin allergy), Feast9 stops and shows a red warning. Change the medicine, or — only if you have checked and it is safe — tick **I have checked the patient's allergy** and save again. The check can miss a drug, so always read the allergy alert at the top too.

The other sections of a case

- **Clinical Attachments** — upload X-rays, photos and lab reports (JPG, PNG or PDF). Only doctors and administrators can delete a file, and must give a reason.
- **Lab Requisitions** — record work sent to a lab and update it when it comes back.
- **Referral Notes** — write a referral to a specialist and print it as a letter.

- **Payment Log** — record each payment received; the balance updates automatically (doctors and administrators).
- **Follow-up & Next Action** — set a reminder date and note. It appears on the Dashboard on that date. **Book Appointment** turns it into a booking; **Mark Follow-up Done** clears it once dealt with.
- **Cost History & Revisions** — every change to the case's cost, with the reason.

Click **Close Case** when the treatment is finished. A closed case stays on record and can still be viewed.

6. Dental chart

Open it from the patient's page with **Dental Chart**. Teeth use the standard international (FDI) numbers. Use **Adult (Permanent)** or **Mixed / Paediatric** to choose which teeth are shown.

Who can do this: Doctors, guest doctors and administrators.

1. Click a tooth on the chart.
2. Choose the surface, the finding (Sound, Caries, Restoration, Crown, Root Canal, Implant, Missing/Extracted, Fracture or Other) and its status: **Existing** (already there), **Planned**, **Ongoing** or **Completed**.
3. For planned work you can give a target date and set it as the case's follow-up.
4. Save. The tooth's colour updates and the entry is added to its history.
 - Colours: **red** needs attention, **blue** scheduled or in progress, **green** stable.
 - Nothing is ever overwritten: a correction is simply a new entry, and the full history stays below the chart.

7. Appointments

Appointments shows the month. Each appointment shows a coloured dot for the doctor and a coloured badge for its status (blue Scheduled, green Completed, grey Cancelled, red No-show).

Booking

1. Click **+ New Appointment**, or the **+** on a day.
2. Choose the patient and doctor, then the date, start and end time, and a short title.
3. Click **Book Appointment**.
 - **Repeating visits** (e.g. braces adjustments): tick **Repeat this appointment**, choose how often and until when. Each visit gets its own entry. When editing one you choose **this occurrence only** or **the whole series**.
 - **From a follow-up: Book Appointment** on the Dashboard or a case fills in the patient, doctor and title for you, and clears the follow-up once booked.

On the day

- A visit note added on the day marks the appointment **Completed** automatically. You can also change the status on the appointment itself.
- Mark a missed visit **No-show**. Feast9 adds a follow-up for the next day so someone calls the patient to rebook.
- If the patient agreed to reminders, the appointment page has a ready-made reminder message: click it to copy, then paste into WhatsApp or SMS.

8. Lab Work

Lab Work lists every job sent to an outside lab, for all patients, so nothing is forgotten. It shows jobs not yet received unless you choose **All**.

- Each row shows the patient, the work, the lab, when it was sent, and the patient's next visit. A **Before visit** badge warns that the patient is coming in before the work is due back.
- Update the expected date, status (Sent, Received, Delayed), received date or notes on the row and click **Save**.
- Doctors add new lab work and delete entries from the case page. Receptionists can view and update this list.

9. Reports and Analytics

Who can do this: Doctors and administrators.

Reports

- Choose a period with the quick buttons (this month, last month, this year, this financial year...) or pick your own dates.
- The page shows revenue collected, cases opened and closed, new patients, revenue by doctor, and patients who haven't visited in a while.
- The **Cases / Payments** table can be filtered and grouped (by patient, doctor, month...). **Download (Excel)** saves exactly what is shown; **Print Report (PDF)** prints the report.

Analytics

Charts for a chosen year: revenue, patients, cases and appointments month by month, busiest days, patient mix, and the most common procedures. Tick **Compare with** the previous year to see the change.

10. Financial Assessment

Who can do this: Doctors and administrators.

- Lists every case with what was billed, collected and still pending. Enter each case's lab cost, consultant fee, consumables and other expenses, then **Save Expenses**. Feast9 works out the profit; a loss is shown in amber.
- **Monthly Evaluation** adds the clinic's running costs for a month (rent, salaries, electricity, loan EMI, cleaning, other). Use **Clone this month's expenses into future months** so you don't retype costs that don't change.
- **Capital Investments** records equipment purchases; the **Long Term** view spreads their cost over their useful life.

11. Privacy Requests

Under India's Digital Personal Data Protection Act, 2023, a patient may ask to see their data, correct it, have it erased, or withdraw consent. The clinic must respond within 90 days, so every request must be recorded in Feast9 as soon as it is made.

Recording a request

Who can do this: Receptionists, doctors and administrators.

1. Open the patient's page and click **+ New Privacy Request** (in Contact Details & Privacy Status).
2. Choose the type — **Access**, **Correction**, **Erasure** or **Withdraw Consent** — write what the patient asked for, and save. The 90-day deadline is set automatically.

Completing a request

Who can do this: Doctors and administrators.

- **Access** — click **Download Patient Data (PDF)** on the request, give it to them, then mark the request Completed.
- **Correction** — fix the details with the patient's **Edit** form, then mark it Completed.
- **Withdraw Consent** — marking it Completed stops reminders to the patient.
- **Erasure** — removes the patient's name and contact details for good (their treatment and payment records are kept, as the law allows). You must type the patient's exact name to confirm.

An Erasure **cannot be completed while the patient still owes money or has an active case** — afterwards nobody could tell who owes it. Settle the balance and close the cases first; the request page tells you what is outstanding.

12. Settings (administrators)

Click **Settings** in the top menu. Each card opens one area.

Who can do this: Administrators only.

- **Users** — add staff accounts and choose their role; deactivate someone who leaves; **Set Password** for someone who forgot theirs; reset two-step sign-in for a lost phone; unlock a locked account.
- **Doctors** — add doctors with their qualifications and registration number (these print on prescriptions) and a calendar colour. Feast9 suggests a colour that differs from the other doctors' and warns if two look alike. Deactivating a doctor keeps all their past records.
- **Case Types** — the procedures offered on new cases. Renaming one updates existing cases too.
- **Clinic Details** — name, address, phone and email; these appear on every printout.
- **Clinic Logo, Login Screen** and **Theme** — the logo, sign-in page wording and colours.
- **Automatic Logout** — how many idle minutes before Feast9 signs people out.
- **Sign-in Security** — make two-step sign-in compulsory for doctors and administrators, or for everyone.
- **Audit Log** — who opened or changed what, and every sign-in.

13. Backup & Data (administrators)

Open **Settings > Backup & Data**. Three tiles at the top show whether backups, the off-site copy and the Excel copy are up to date.

Who can do this: Administrators only.

Setting up backups (once)

1. Click **Set Up Backups**. Feast9 makes the first backup and shows a **backup key**.
2. Copy the key and keep it somewhere safe **away from this computer** (for example printed and locked away). Without it a backup can't be restored.
3. Under **Backup settings**, choose the daily time and, ideally, a **copy folder** on a USB drive or another computer, so a copy survives if this PC fails.
 - Backups then run every day by themselves. **Back Up Now** makes one immediately, for example before a big change.
 - The **Excel Copy** is a spreadsheet of everything, readable without Feast9 — a "Plan B" if the computer is ever unavailable.
 - **Import from Excel** brings in patients from the old system using the template provided.

14. Good habits

Do

- Use two-step sign-in, and keep your recovery codes somewhere safe.
- Click **Logout** whenever you leave a shared computer.
- Record a privacy request on the day the patient asks.
- Tell the administrator at once if your phone is lost or you think someone knows your password.

Don't

- Share your username, password or codes — not even with colleagues. Everything you do is recorded under your name.
- Leave a patient's record open on a screen patients can see.
- Write passwords on notes stuck to the screen.

15. Common questions

I was signed out while working.

Feast9 signs you out after a period without activity, and always after 12 hours. Sign in again; anything already saved is safe.

It says my account is locked.

Too many wrong passwords. Wait 15 minutes, or ask the administrator to unlock it.

Feast9 asks for my password again.

You are doing something sensitive and signed in more than 10 minutes ago. Type your password (and code, if asked) to carry on.

I can't find a patient.

Click **All patients** — the normal list only shows patients with an active case or money owing — and check the spelling or try the mobile number.

I made a mistake in a visit note, prescription or payment.

These can't be edited, to keep the record trustworthy. Add a new entry that explains the correction.

A follow-up won't leave the Dashboard.

Click **Done** once the patient has been contacted, or **Book Appointment**.

I can't complete an Erasure request.

The patient still owes money or has an active case. The request page says which.

Who do I ask for help?

Your clinic's Feast9 administrator.
